

Blue Flame Vent-Free Gas Space Heaters

Blue Flame Heaters produce convection heat and warm much like a central heating system. These heaters warm the air first, then people and objects. Altogether, the heat is more “gentle” as the warming process occurs. Adding to its beauty, the blue flame glows through tempered, tinted glass for warm, intimate comfort.

Infrared Vent-Free Gas Space Heaters

Infrared Plaque Heaters produce radiant heat much like the sun. Direct heat from the radiant plaques quickly warms people and objects in the room before heating the air. As you enjoy the immediate comfort, the bright orange plaques illuminate a warm glow.

Benefits

Money Saving Comfort

- Vantage Hearth's "Zone Heating" warms your immediate living space and lets you turn down the thermostat for great savings. With Vantage Hearth, you can save 15% for 5 degree thermostat set-back.

Safety Features Built Right In

- Meets or exceeds every safety & performance standard.
- Standard equipment includes matchless ignition, safety pilot systems, grille over heating elements, plus much more.
- Dual purpose safety pilot system protects against oxygen depletion and any interruption in the fuel supply.

Easy To Install

- All hardware included to mount to the wall or floor
- Connects to gas source - no vent pipe or chimney required

Works Even if the Power Doesn't

- No electricity required
- To start the heater, simply press the "matchless" ignition

Work We Stand Behind

- Limited four year warranty*

Keeping your Comfort in Control

- In order to meet all your heating needs, Vantage Hearth Vent-Free Gas Heaters are available in manually operated and thermostatically controlled models.

Manually Controlled Heaters

- Manual Control - Blue Flame & Infrared models allow you to choose the heat setting you prefer by simply turning the control knob. The heater will operate at the selected level until the control knob is turned to off or another setting.

Thermostatically Controlled Heaters

- Thermostatic Control - Blue Flame & Infrared models operate by gradually modulating the heat output and flame height from the selected setting to lower settings, or pilot, in order to maintain a consistent room temperature. Operating from pilot, thermostatically controlled infrared models turn all the plaques on or off to maintain the heat output desired.
