

THE LADERA SERIES

Vented Gas Log Systems

Avalon

Superior design, performance and features together with true, wood-burning realism hallmark the most innovative, most advanced hearth products ever available. Only from Design Dynamics.

Innovation on fire

It isn't often that a product offers design, features, performance and quality at a level to lead an entire industry in virtually every category. The exclusive Ladera Series from Design Dynamics presents you this rare opportunity with the beautiful new Avalon vented gas log system.

Dramatic Realism

The Avalon's intricately detailed, generous 8-log stack, 5 log scraps, ember chips, and cascading ember bed burner are painstakingly recreated from an actual wood fire; complete with logs, coals and embers. Then everything is hand finished in multiple combinations of natural wood tones and smoky, charred details for true to life, wood realism. The low profile, ramp-style ember burner creates lively, natural flame patterns and a deep smoldering glow that only a wood fire could match. The control and gas train assembly is completely hidden from view to maximize the realistic scene.

Outstanding Performance

Despite it's completely random appearance, the log set is carefully designed for optimum performance as well as aesthetics, and unitized with the burner as a single arrangement. The high operating temperatures of the burner design maximize the glowing and heating properties of the ceramic material, for the cleanest, most complete burn in the industry with heat you can truly feel.

Absolute Safety & Convenience

Design Dynamics goes above and beyond when it comes to safety of our products. In addition to industry-leading, clean flame combustion technology, the Avalon includes a millivolt safety gas control with multi-function remotecontrol and matchless, piezo ignition. The control and gas train are 100% factory assembled and tested.

Instant Enjoyment

The Avalon's unitized, fully assembled log and burner design also makes installation a breeze. Just complete the gas connection using the shut-off valve and stainless flex connector provided. And unlike other manufacturers, since Design Dynamics' products don't require any break in or "burn off" period, you can enjoy your new gas logs instantly.

Standard Features:

- Realistic ceramic fiber 8-log set is unitized to assure safety, performance, and ease of installation.
- Decorative 5 pc. log scrap kit, glowing ember chips and lava floor cinders complete the custom hearth presentation.
- Single flame, high efficiency ceramic ramp burner for realistic look and feel, creates active, colorful flame presentation and plenty of glowing coals.
- Hand-held, multi function radio frequency remote control
- Fully assembled millivolt gas train assembly; concealed to maximize realism, includes matchless, piezo igniter.
- Design certified decorative gas appliance (ANSI Z21.60.A-2003).

Solid, unitized log arrangement is intricately detailed.

Gas train/control assembly is fully assembled and factory tested.

Standard feature components include hand-held, multi-function remote control

Log Size	Minimum Firebox Size			
	Height	Depth	Front Width	Rear Width
